Instruction Manual for FrSky TANDEM X20

Introduction

FrSky Electronic Co., Ltd. www.frsky-rc.com Contact us: frsky@frsky-rc.com Add: F-4, Building C, Zhongxiu Technology Park, No.3 Yuanxi Road, Wuxi, 214125, Jiangsu, China Technical Support: sales4tech@gmail.com

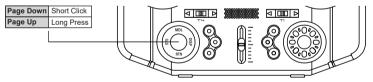

Reishu Instruction Manual for FrSky TANDEM X20

Led on: in Charging/Led off: end of charge/flash: charge fault Battery compartment size: 84*41.5*20mm (L*W*H)

- Note: 1. Charge the battery with the USB adapter (Voltage: 5V+0.2V Current: >2.0A) when you use the USB charging function. 2. The lower the initial charging voltage, the better the charging effect is when the voltage
 - difference cells exceed 50 mV between the two.

Navigation Controls

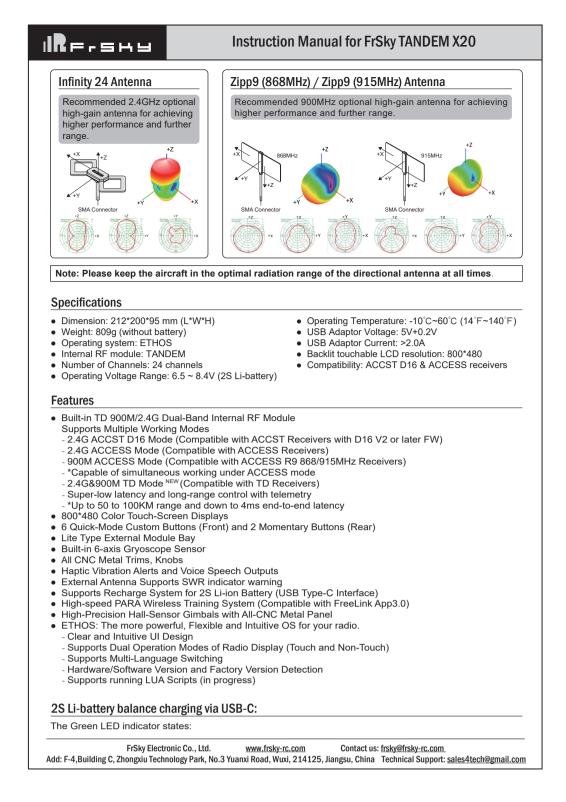

The left navigation control does RTN, SYS, MDL, DISP and Page UP/Down. The right navigation control does scroll and enter. Both navigation controls and touch screen can be used to control the system

ETHOS Suite

With ETHOS Suite,you can update the radio bootloader, firmware, SD card, flash, and also convert image format and audio format. Find the latest infomation and download the ETHOS Suite at ethos frsky-rc.com/

ire-sky Instruction Manual for FrSky TANDEM X20 Step 2: Configure the model channel and create the model name. < Create model < Create m -Model Setup Procedure-Internal Module Step 1: < Mode 88.1 💷 RF system menu.

Touch the screen or use the navigation keys to enter the

4)ID

Choose the INT MODULE. Then turn ON INTERNAL RF, select the OUTSIDE or INSIDE ANTENNA (Dual internal na work simultaneously while selecting the OUTSIDE ANTENNA.) antennas and external a

Note: To use the ETHOS Suite application with a FrSky radio, please always keep the radio bootloader with the latest version.

ETHOS Operating System

Create the model

Step 1: First go to System Settings, then click Model Select to select the model type

Instruction Manual for FrSky TANDEM X20

Step 3: Set the Receiver Number

< RF system	ETH <mark>OS</mark>	.ii 4.œ
Туре		ACCESS 🔻
2.4G		OFF 👥 OF
Antenna		Internal 🔻
900M		OFF 🌒 OF
Model ID		
Channels Range		CH1 - CH24
Set		Register Range Check

The system will assign you the receiver a number automatically, when you create a new model, and this can be easily changed. The range of the Model ID is 00-63, with the default number being 01. Once the receiver is set to the desired number and is bound to the TANDEM X20, the bind procedure will not need to be repeated unless the receiver number is changed. At this point, set the receiving number to your preferred number and repeat the binding operation.

Step 4 : Registration

In ACCESS model, select the STATE [Register] into Registration status on radio side. Then Press the F/S button and power on your receiver, and select the "RX Name XX" and [REGISTER] to complete the Registration process then power down the receiver.

			_	
< Register	ETHOS	äik	RF syste	m E

FCC

Instruction Manual for FrSky TANDEM X20

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules

CE

The product may be used freely in these countries: Germany, UK, Italy, Spain, Belgium, Netherlands, Portugal, Greece, Ireland, Denmark, Luxembourg, Austria, Finland, Sweden, Norway, Switzerland, France and Iceland.

FLYING SAFETY

To ensure the safety of yourself and others, please observe the following precautions.

① Have regular maintenance performed. Although your TANDEM X20 protects the model memories with non-volatile EEPROM memory (which does not require periodic replacement) and of a battery, it still should have regular check-ups for wear and tear. We recommend sending your system to your FrSky Service Center annually during your non-flying-season for a complete check-up and service.

Battery

▲ Warning:

① Using a fully charged battery (DC 6.5~8.4V). A low battery will soon die, causing loss of control and a crash. When you begin your flying session, reset your transmitter's built-in timer, and during the session pay attention to the duration of usage. Also, if your model used a separate receiver battery, make sure it is fully charged before each flying session

(1) Stop flying long before your batteries become over discharged. Do not rely on your radio's low battery

RX2	Hold	Bind	Set	Reset
RX3	Custom	Bind	Set	Reset
Set Failsafe	No Pulses			
Options	Receiver		Set	

Instruction Manual for FrSky TANDEM X20

 No Pulse: on loss of signal the receiver produces no pulses on any channel. To use this type, select it in the menu and wait 9 seconds for the failsafe to take effect.

 Hold: the receiver continues to output the last positions before signal was lost. To use this type, select it in the menu and wait 9 seconds for the failsafe to take effect

 Custom: pre-set to required positions on lost signal. Move the cursor to the failsafe mode of channel and press

Encoder, then choose the Custom mode. Move the cursor to the channel you want to set failsafe on, and press Encoder.

Then rotate the Encoder to set your failsafe for each channel and short press Encoder to finish the setting. Wait 9 seconds before the failsafe takes effect

Notice:

• When failsafe is disabled on TANDEM X20 side, the failsafe set on receiver side will be used.

 SBUS port does not support the No Pulse failsafe mode and always outputs. Set "Hold" or "Custom" for SBUS port.

Step 7: Range

Range refers to TANDEM X20 range check mode. A pre-flight range check should be done before each flying session. Move the cursor to "STATE", scroll the Encoder to select "RANGE" mode and press Encoder. In range check mode, the effective distance will be decreased to 1/30. Press the Encoder again, turn to normal state.

Re-SHU

Instruction Manual for FrSky TANDEM X20

① Make sure your transmitter can't tip it over. If it is knocked over, the throttle stick may be accidentally moved, causing the engine to speed up. Also, damage to your transmitter may occur.

① In order to maintain complete control of your aircraft it is important that it remains visible at all times. Flying behind large objects such as buildings, grain bins, etc. must be avoided. Doing so may interrupt the radio frequency link to the model, resulting in loss of control.

- O Do not grasp the transmitter's antenna during flight. Doing so may degrade the quality of the radio frequency transmission and could result in loss of control.
- O As with all radio frequency transmissions, the strongest area of signal transmission is from the sides of the transmitter's antenna. As such, the antenna should not be pointed directly at the model. If your flying style creates this situation, easily move the antenna to correct this situation.
- \oplus Don't fly in the rain! Water or moisture may enter the transmitter through the antenna or stick openings and cause erratic operation or loss of control. If you must fly in wet weather during a contest, be sure to cover your transmitter with a plastic bag or waterproof barrier. Never fly if lightning is expected.

Updates

FrSky is continuously adding features and improvements to our radio systems. Updating (via USB Port or the Micro SD card) is easy and free. To get the most from your new transmitter, please check the download section of the FrSky website for the latest update firmware and guide for adjusting your sticks. (www.frsky-rc.com)

warning systems, intended only as a precaution, to tell you when to recharge. Always check your transmitter and receiver batteries prior to each flight.

Where to Flv

We recommend that you fly at a recognized model airplane flying field. You can find model clubs and fields by asking vour nearest hobby dealer

① Always pay particular attention to the flying field's rules, as well as the presence and location of spectators, the wind direction, and any obstacles on the field. Be very careful flying in areas near power lines, tall buildings, or communication facilities as there may be radio interference in their vicinity.

At the flying field

- () To prevent possible damage to your radio gear, turn the power switches on and off in the proper sequence:
- 1. Pull throttle stick to idle position, or otherwise disarm your motor/engine.
- 2. Turn on the transmitter power and allow your transmitter to reach its home screen.
- 3. Confirm the proper model memory has been selected.

4 Turn on your receiver power

- 5. Test all controls. If a servo operates abnormally, don't attempt to fly until you determine the cause of the problem. 6. Start your engine.
- 7. Complete a full range check.
- 8. After flying, bring the throttle stick to idle position, engage any kill switches or otherwise disarm your motor/engine.

If you do not turn on your system on and off in this order, you may damage your servos or control surfaces, flood your engine, or in the case of electric-powered or gasoline-powered models, the engine may unexpectedly turn on and cause a severe injury.
